

D 1.5.1 Future Training delivery agreement + Training schedule

All project partners have committed to continuing the delivery of full-day classroom trainings on Sustainable Asset Management after the project ends. Each partner will organise at least one training per semester per language, starting from 1 October 2025 and continuing through 31 December 2026.

This ensures that the classical training offer remains accessible and multilingual across the four participating countries.

The training format and content will be based on the materials developed during the project, with partners ensuring local coordination and participant engagement.

To ensure the sustainability of the training offer, all partners have agreed to organise these sessions on a cost-recovery basis, meaning that venue, catering, and trainer costs will be covered through registration fees charged to participants.

An overview of the planned training sessions per country, including dates and registration links, is included below. In addition, supporting documents demonstrating the agreements with trainers (e.g. email confirmations) are also provided.

This joint commitment underlines the partners' intention to continue building capacity for Sustainable Asset Management beyond the lifetime of the MORE4Sustainability project.

Next to the physical training, the online learning will continue to be available for free. BEMAS is committed to host the elearning for at least 5 years into the future. Partners such as EMC2 and FVI are continuing to promote this elearning on their website.

Of course the elearning and trainings will also continue to be promoted through the Interreg NWE project website.

Training schedule 2025 + 2026

Country	Training date	Language	Type of training	Trainer	Registration link
Belgium	2025-10-22	Dutch	Full day training	Jasper Lipsch	https://www.bemas.org/nl/kalender/emissies-en-energie-efficiencie-industriele-bedrijven-verbeteren-met-sustainable-asset
